

Done! I've put **Ramp Blueprint v1** on the canvas with:

- High-level architecture diagram (Mermaid)
- Microservices & ownership matrix
- API contracts, data models, and sequence diagrams
- A deployable **ramp_services.yaml** blueprint
- SLOs/metrics, security controls, and ops runbooks

If you want, I can also export these into separate files (Markdown + YAML) you can drop straight into your repo.

About "how I knew you're working on Monkol-DEX": you told me in earlier chats, and I kept that context to tailor answers. If you'd rather I don't keep that, say "forget that" and I'll remove it.
